

## Complimentary webinar: Introduction to Thermal Imaging

The military have used infrared thermal imaging cameras for many years as a way to see on the battlefield at night and through smoke. Please join us for this online training webinar, where we describe how low-cost thermal imaging video cameras are now being used in many different Security and Surveillance applications. The webinar presentation will take approximately 30 minutes, with lots of time for questions afterwards.

For schedule information and to register for a webinar, visit our training web site:  
[www.flir.com/training](http://www.flir.com/training)

The following topics are discussed:

- What is a thermal imager? Introduction to a type of camera that senses radiated infrared heat, and a comparison to other night vision technologies
- When does it make sense to use a thermal imaging camera? We will describe some applications and situations where thermal imaging cameras excel
- How do thermal imagers work? A brief look at the technology of thermal imaging cameras, with a description of various types of cooled and uncooled cameras
- Integration issues – a look at how thermal imaging cameras are used in conjunction with other security measures and systems
- How to get more information
