1.1 Copyright

© 2015, FLIR Systems, Inc., All rights reserved worldwide. No parts of the software including source code may be reproduced, transmitted, transcribed or translated into any language or computer language in any form or by any means, electronic, magnetic, optical, manual or otherwise, without the prior written permission of FLIR Systems.

The documentation must not, in whole or part, be copied, photocopied, reproduced, translated or transmitted to any electronic medium or machine readable form without prior consent, in writing, from FLIR Systems.

Names and marks appearing on the products herein are either registered trademarks or trademarks of FLIR Systems and/or its subsidiaries. All other trademarks, trade names or company names referenced herein are used for identification only and are the property of their respective owners.

1.2 Quality Assurance

The Quality Management System under which these products are developed and manufactured has been certified in accordance with the ISO 9001 standard.

FLIR Systems is committed to a policy of continuous development; therefore we reserve the right to make changes and improvements on any of the products without prior notice.

1.3 Documentation

To access the latest manuals and notifications, go to the Download tab at: http://support.flir.com. It only takes a few minutes to register online. In the download area you will also find the latest releases of manuals for our other products, as well as manuals for our historical and obsolete products.

1.4 Disposal of Electronic Waste

As with most electronic products, this equipment must be disposed of in an environmentally friendly way, and in accordance with existing regulations for electronic waste.

Please contact your FLIR Systems representative for more details.
2. Safety

Safety Notes

- Before operating the device, you must read, understand, and follow all instructions, dangers, warnings, cautions, and notes.
- FLIR Systems reserves the right to discontinue models, parts or accessories, and other items, or to change specifications at any time without prior notice.
- Remove the batteries if the device is not used for an extended period of time.

⚠️ Warning Statements

- Do not operate the device if you do not have the correct knowledge. Formal qualifications and/or national legislation for the electrical inspections can apply. Incorrect operation of the device can cause damage, shock, injury or death to persons.
- Do not start the measuring procedure before you have set the function switch to the correct position. This can cause damage to the instrument and can cause injury to persons.
- Do not change to current or resistance when you measure the voltage. This can cause damage to the instrument and can cause injury to persons.
- Do not measure the current on a circuit when the voltage increases to more than 1000 V. This can cause damage to the instrument and can cause injury to persons.
- You must disconnect the test leads from the circuit that you did a test on before you change the range. If you do not do this, damage to the instrument and injury to persons can occur.
- Do not replace the batteries before you remove the test leads. This can cause damage to the instrument and can cause injury to persons.
- Do not use the device if the test leads and/or the device show signs of damage. Injury to persons can occur.
- Be careful when taking measurements if the voltages are more than 25 VAC rms or 35 VDC. There is a risk of shock from these voltages. Injury to persons can occur.
- Do not do diode, resistance or continuity tests before you have removed the power from capacitors and other devices under test during a measurement. Injury to persons can occur.
- Make sure that children cannot touch the device. The device contains dangerous objects and small parts that children can swallow. If a child swallows an object or a part, speak with a physician immediately. Injury to persons can occur.
- Do not let children play with the batteries and/or the packing material. These can be dangerous for children if they use them as toys.
- Do not touch expired or damaged batteries without gloves. Injury to persons can occur.
- Do not cause a short circuit of the batteries. This can cause damage to the instrument and can cause injury to persons.
- Do not put the batteries into a fire. Injury to persons can occur.
## Cautions

Do not use the device for a procedure that it is not intended for. This can cause damage to the protection.

3. Introduction

Thank you for selecting the FLIR CM72_CM74 Clamp Meter. The CM72 is a True RMS 600A AC Clamp Meter and the CM74 is a True RMS 600A AC/DC clamp meter with integrated VFD Mode, Inrush Current capture. Both meters have a Lo Z mode for eliminating ‘ghost’ voltages. This device is shipped fully tested and calibrated and, with proper use, will provide years of reliable service.

3.1 Key Features

- 6000-count digital display
- Large-scale 2.0” backlit display
- Work light
- Auto Range True RMS AC 600 A capability and selection CM72
- Auto Range True RMS AC/DC 600 A capability and selection CM74
- Auto Range True RMS AC/DC 600 V capability and selection
- Frequency AC bandwidth (45-400Hz)
- Frequency Measurements to 60KH
- Flex Clamp adaptor input for FLIR TA72_TA74 Clamp adaptors
- Resistance and Continuity measurements
- Capacitance and Diode measurements
- Data hold
- Inrush current (CM74 only)
- DCA zero function (CM74 only)
- Low Z (Impedance) mode for both models CM72 and CM74
- Minimum/Maximum HOLD memory
- Integrated VFD mode (Low-pass filter) CM74 only
- Auto power off
- Jaw opening 35mm (1.38”)
- Easy-access battery cover mechanism
- Safety Category Rating: CAT IV-600V, CAT III-1000V
4. Meter Description

4.1 Meter Parts

1. Jaw opening trigger
2. Hz-MODE button
3. Backlight/Work light button (CM74); Backlight button only (CM72)
4. Function switch
5. COM (negative -) Probe Input jack
6. Positive (+) Probe Input jack
7. DCA Zero and Inrush button (CM74 only)
   Work light button (CM72)
8. MIN/MAX HOLD button
9. AUTO-RANGE Button
10. LCD Display
11. Clamp jaw

### 4.4.1 Out-of-range Warning
If the input is out-of-range, OL is displayed.
5. **Operation**

**Note:** Before operating the device, you must read, understand, and follow all instructions, dangers, warnings, cautions, and notes.

**Note:** When the meter is not in use, the function switch should be set to the **OFF** position.

**Note:** When connecting the probe leads to the device under test, connect the negative lead before connecting the positive lead. When removing the probe leads, remove the positive lead before removing the negative lead.

5.1 **Powering the Meter**

1. Set the function switch to any position to switch the meter ON.
2. If the battery indicator shows that the battery voltage is low or if the meter does not power on, replace the batteries. See section 6.2 *Battery replacement*.

5.1.1 **Auto Power Off**

The meter enters sleep mode after 10 minutes of inactivity. The meter beeps three times before powering off. Press any button or turn the function switch to prevent the meter from powering off. The auto power off time-out is then reset. To disable auto power off press the MODE button while turning the meter ON. The APO icon is displayed when APO is active.

5.2 **Auto/Manual Range Mode**

In Auto range mode, the meter automatically selects the most appropriate measurement scale. In Manual range mode, the desired range (scale) can be set manually.

Auto range mode is the default mode of operation. When a new function is selected with the function switch, the starting mode is Auto range and the indicator is displayed.

To enter Manual range mode, press the RANGE button. To change the range, press the RANGE button repeatedly until the desired range is displayed.

To return to Auto range mode from Manual mode, press and hold the RANGE button until the indicator is displayed.

5.3 **HOLD Mode**

1. In Hold mode, the display freezes the last reading and continues to display this value.
2. Press the HOLD button to toggle between Normal and Hold modes. In Hold mode, the indicator is displayed.
5.4 Voltage and Current Measurements

**Note:** If the measured voltage is greater than 30 V DC or AC RMS, the \(\text{\textcopyright} \) indicator is displayed.

### 5.4.1 Basic Voltage Measurements

1. Set the function switch to the V position.
2. To manually select AC or DC, press the **MODE** button.
3. To manually select the measurement range (scale), press the **RANGE** button repeatedly. Refer to section 5.2 Auto/Manual range mode.
4. Insert the black probe lead into the negative COM terminal and the red probe lead into the positive V terminal.
5. Connect the probe leads in parallel to the part under test.
6. Read the voltage value on the display.

![Voltage Measurements Diagram](image)

**Figure 5.1** Voltage Measurements

### 5.4.2 ‘Lo Z’ Voltage Measurements

When the function switch is turned to the \(\text{Lo Z} \) position, the meter incorporates a low impedance circuit that eliminates ghost voltages. The low impedance is approx. 2.5k\(\Omega\). To take voltage measurements in the Lo Z mode, select the \(\text{Lo Z} \) function switch position and follow the voltage measurement instructions in the previous section.
5.4.3 Basic Current Measurements

⚠️ **WARNING** Do not measure the current on a circuit when the voltage increases to more than 600V (CM72) or 1000V (CM74). This can cause damage to the instrument and can cause injury to persons.

When measuring current using the clamp jaws, only one conductor should be enclosed by the jaws—refer to Figure 5.2.

---

![Correct and incorrect setup](image)

**Figure 5.2** Correct and incorrect setup

1. Ensure that the probe leads are disconnected from the meter.
2. Set the function switch to the **A** position.
3. To manually select AC or DC press the **MODE** button repeatedly. DCA is only available on the CM74.
4. To manually select the measurement range (scale), press the **RANGE** button repeatedly. Refer to section 5.3 *Auto/Manual range mode*.
5. Press the trigger to open the clamp jaws. Fully enclose one conductor—refer to Figure 5.2. For optimum results, center the conductor in the jaws.
6. Read the current value on the display.
5.4.4 Extended Functionality Modes

In addition to the basic measurements that the CM72 and CM74 can perform, a variety of extended functions are included. Refer to the following sections for details.

5.4.4.1 Inrush Current Mode (CM74 only)

In Inrush current mode, the meter displays the highest AC current reading in the first 100ms period after the trigger point (current detection threshold) is reached, see Fig. 5.3 below. The current detection threshold is 0.5A for the 60.00A range and 5.0A for the 600.0A range. Inrush current mode is available when measuring AC current.

1. Connect the meter to the unpowered circuit under test
2. Set the meter to A
3. Press the Inrush button [ ] to enable the Inrush current mode. The Inrush display icon will appear on the LCD.
4. Turn on the power to the circuit under test
5. When the threshold is reached, the meter will display the RMS reading for the 100ms integration time.

Figure 5.3 Inrush Current
5.4.4.2 DCA Zero Mode (CM74 only)

The DC zero feature removes offset values and improves the accuracy for DC current measurements.

1. Ensure that there is no conductor in the clamp jaws.
2. Press the DCA Zero button \[ \text{DCA Zero} \] to enable DC Zero. The display will zero.

5.4.4.3 Frequency Mode

In Frequency mode, the meter measures and displays the frequency. Frequency mode is available when measuring AC current or voltage.

Important note: Do not switch to the Frequency mode until the meter is setup and actively measuring the voltage or current signal.

Press and hold the MODE button to select Hz and enable Frequency mode.

5.4.4.4 MIN/MAX Mode

In MIN/MAX mode, the meter captures and displays the Minimum and Maximum readings and updates only when a higher/lower value is registered.

1. Press and hold the HOLD button to access the MIN/MAX mode.
2. The first screen will be the MIN screen. The down arrow \[ \downarrow \] will appear (indicating MIN mode) and the displayed reading will represent the lowest reading encountered since the HOLD button was first pressed.
3. Press the HOLD button again; this next screen will be the MAX display. The up arrow \[ \uparrow \] will appear (indicating MAX mode) and the displayed reading will represent the highest reading encountered since the HOLD button was first pressed.
4. Continue to use the HOLD button to toggle the MIN/MAX readings as desired.
5. Press and hold the HOLD button for 2 seconds to exit the MIN/MAX mode. The meter will return to normal operation and the MIN/MAX memories will be reset.

5.4.4.5 VFD Mode (low pass filter) CM74 only

The VFD mode eliminates high frequency noise in voltage measurements by means of a low-pass filter. The VFD mode is designed for variable frequency drive (VFD) measurements. This mode is always active for AC measurements. The VFD display icon is always displayed \[ \text{VFD} \] when AC Current or AC Voltage modes are selected.
5.4.4.6 Flex Clamp Adaptor Use

A FLIR Clamp Adaptor (Models TA72 and TA74) can be connected to the CM72 or CM74 to display current measurements made by the FLEX Clamp Adaptor.

1. Turn the function dial to the position.
2. Connect the Flex Clamp as shown.
3. Set the Range of the Flex Clamp Adaptor to match the range of the CM174.
4. Operate the Flex Clamp per instructions provided with the Flex Clamp meter.
5. Read the current measured by the Flex Clamp on the CM72 or CM74 LCD.

Figure 5.4 Connecting a FLIR Flex Clamp Adaptor
5.5 Resistance Measurements

**Warning:** Do not perform resistance tests before removing the power from resistors and other devices under test during a measurement. Injury to persons can occur.

1. Set the function switch to the \( \Omega \) position.
2. Use the MODE button to select the resistance mode (continuity symbol \( \square \)) should be OFF).
3. Insert the black probe lead into the negative COM terminal and the red probe lead into the positive \( \Omega \) terminal.
4. Touch the tips of the probe across the circuit or component under test.
5. Read the resistance value on the display.

![Resistance and Continuity Measurements](image)

**Figure 5.5** Resistance and Continuity Measurements

5.6 Continuity Test

**Warning:** Do not perform continuity tests before removing the power to the component, circuit, or other device under test during a measurement. Injury to persons can occur.

1. Set the function switch to the \( \square \) position.
2. Insert the black probe lead into the negative COM terminal and the red probe lead into the positive \( \Omega \) terminal. Refer to Fig. 5-5 for connection example.
3. Use the MODE button to select continuity measurement. The \( \square \) indicator will be displayed.
4. Touch the tips of the probe across the circuit or component under test.
5. If the resistance is lower than 30 \( \Omega \), the meter will beep.
5.7 Capacitance Measurements

**Warning:** Do not perform capacitance tests before removing the power to the capacitor or to other devices under test during a measurement. Injury to persons can occur.

1. Set the function switch to the \(-\) position.
2. Use the **MODE** button to select capacitance function (capacitor symbol must be displayed).
3. Insert the black probe lead into the negative COM terminal and the red probe lead into the positive \(-\) terminal.
4. Touch the tips of the probe across the part under test.
5. Read the capacitance value on the display.

**Note:** For very large capacitance values, several seconds may be required for the measurement to settle and for the final reading to stabilize.

![Figure 5.6 Capacitance Measurements](image-url)
5.8 Diode Test

**Warning:** Do not perform diode tests before removing the power to the diode or other devices under test during a measurement. Injury to persons can occur.

1. Set the function switch to the diode position.
2. Insert the black probe lead into the negative COM terminal and the red probe lead into the positive Ω terminal.
3. Use the MODE button to select the diode test function. The diode indicator will be displayed.
4. Touch the tips of the probe across the diode or semiconductor junction under test.
5. If the reading is between 0.40 and 0.80V in one direction and OL (overload) in the opposite direction, the component is good. If the measurement is 0V in both directions (shorted) or OL in both directions (open), the component is bad.

![Diode Tests Diagram](image)

*Figure 5.7 Diode Tests*
6. Maintenance

6.1 Cleaning and Storage

Clean the meter with a damp cloth and mild detergent; do not use abrasives or solvents.

If the meter is not to be used for an extended period, remove the batteries and store them separately.

6.2 Battery Replacement

1. To avoid electrical shock, disconnect the meter if connected to a circuit, remove the probe leads from the terminals, and set the function switch to the OFF position before attempting to replace the batteries.
2. Unlock and remove the battery compartment cover.
3. Replace the four (4) standard AAA batteries, observing correct polarity.
4. Secure the battery compartment cover.

6.2.1 Disposal of Electronic Waste

As with most electronic products, this equipment must be disposed of in an environmentally friendly way, and in accordance with existing regulations for electronic waste.

Please contact your FLIR Systems representative for more details.
7. Specifications

7.1 General specifications

Display counts: 0~6000
Measuring rate: 3 times per second
Over-range indication: OL or –OL.
Auto power off: 10 minutes (can be disabled)
Low battery indicator: is displayed. Replace battery when indicator appears.
Power requirement: 4 × 1.5 V AAA alkaline batteries.
Battery life: Approx. 200 hours for CM72; 100 hours for CM74 (with alkaline batteries and backlight/work light off)
Calibration: 1 year calibration cycle.
Operating conditions:
14 to 50°F (-10 to 10°C) (non-condensing)
50 to 86°F (10 to 30°C) (≤ 80% RH)
86 to 104°F (30 to 40°C) (≤ 75% RH)
104 to 122°F (40 to 50°C) (≤ 45%RH)

Storage conditions: 4 to 140°F (-20 to 60°C); 0–80% RH (batteries not installed)
Dimensions: (D × W × L): 1.7 × 3.5 × 9.5 in. (43 mm × 89 mm × 241 mm)
Weight CM72: 12.8 oz. (363g) including batteries
Weight CM74: 15.0 oz. (426g) including batteries
Temperature coefficient: 0.2 × (specified accuracy)/°C, <64.4°F (18°C), >82.4°F (28°C)
Over-voltage category: IEC 61010-1 CAT IV-600 V, CAT III-1000 V, IEC 61010-2-033

Notes:

LCD Displays ‘0’ counts when the AC reading is <10 counts
CM72 Overload protection: 600 V (rms)
CM74 Overload protection: 1000V (rms)
Input impedance: 10 MΩ //, <100 pF
Lo Z Input impedance: 2.5kΩ
AC conversion type: AC coupled, true RMS responding, calibrated to the RMS value of a sine wave input.
Accuracies are given for sine waves at full scale and non-sine waves below half scale.
If the meter measures a 4000-count signal and the Crest Factor of the signal is more then 3.0, the reading may not meet specified tolerances. For non-sine waves (50/60 Hz), add the following Crest Factor corrections:
- For a crest factor of 1.0–2.0, add 3.0% to the accuracy.
- For a crest factor of 2.0–2.5, add 5.0% to the accuracy.
- For a crest factor of 2.5–3.0, add 7.0% to the accuracy.
### Table 7.2 Current (TRMS)

<table>
<thead>
<tr>
<th>Function</th>
<th>Range</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>DCA (CM74 only)</td>
<td>60.00 A</td>
<td>± (2% + 5 dgt)</td>
</tr>
<tr>
<td></td>
<td>600.0 A</td>
<td></td>
</tr>
<tr>
<td>ACA</td>
<td>60.00 A</td>
<td>± (2% + 5dgt) 45~65Hz</td>
</tr>
<tr>
<td></td>
<td></td>
<td>± (2% + 5dgt) 65~400Hz for CM74</td>
</tr>
<tr>
<td></td>
<td>600.0 A</td>
<td>± (2% + 5dgt) 45~65Hz</td>
</tr>
<tr>
<td></td>
<td></td>
<td>± (3% + 5dgt) 65~400Hz for CM72</td>
</tr>
<tr>
<td>ACA VFD (CM74 only)</td>
<td>60.00 A</td>
<td>± (2% + 5 dgt) 45~65Hz</td>
</tr>
<tr>
<td></td>
<td></td>
<td>± (6% + 5 dgt) 65~400Hz</td>
</tr>
<tr>
<td></td>
<td>600.0 A</td>
<td></td>
</tr>
</tbody>
</table>

**Notes:**
- **CM72:** No VFD Mode and ACA Only
- **CM74:** Integrated VFD Mode always ON in ACA MODE
- Overload protection: 600A (rms)
- **Position Error:** ±1% of reading for CM74 (CM72 not specified).
- **AC Conversion Type and additional accuracy is same as AC Voltage.**
- **DCA affected by the temperature and residual magnetism; use DCA Zero function to compensate.**
- **AC conversion type:** AC coupled, true RMS responding, calibrated to the RMS value of a sine wave input. Accuracies are given for sine waves at full scale and non-sine waves below half scale.
- **If the meter measures a 4000-count signal and the Crest Factor of the signal is more then 3.0, the reading may not meet specified tolerances.** For non-sine waves (50/60 Hz), add the following Crest Factor corrections:
- **For non-sine waves (50/60 Hz), add the following crest factor corrections:**
  - For a crest factor of 1.0–2.0, add 3.0% to the accuracy.
  - For a crest factor of 2.0–2.5, add 5.0% to the accuracy.
  - For a crest factor of 2.5–3.0, add 7.0% to the accuracy.
<table>
<thead>
<tr>
<th>Function</th>
<th>Range</th>
<th>Accuracy</th>

9. Warranties

9.1 FLIR Global Limited Lifetime Warranty

A qualifying FLIR Test and Measurement product (the “Product”) purchased either directly from FLIR Commercial Systems Inc. and affiliates (FLIR) or from an authorized FLIR distributor or reseller that Purchaser registers on-line with FLIR is eligible for coverage under FLIR’s Limited Lifetime Warranty, subject to the terms and conditions in this document. This warranty only applies to purchases of Qualifying Products (see below) purchased and manufactured after April 1, 2015.

PLEASE READ THIS DOCUMENT CAREFULLY; IT CONTAINS IMPORTANT INFORMATION ABOUT THE PRODUCTS THAT QUALIFY FOR COVERAGE UNDER THE LIMITED LIFETIME WARRANTY, PURCHASER’S OBLIGATIONS, HOW TO ACTIVATE THE WARRANTY, WARRANTY COVERAGE, AND OTHER IMPORTANT TERMS, CONDITIONS, EXCLUSIONS AND DISCLAIMERS.

1. PRODUCT REGISTRATION. To qualify for FLIR’s Limited Lifetime Warranty, Purchaser must fully register the Product directly with FLIR on-line at http://www.flir.com within Sixty (60) DAYS of the date the Product was purchased by the first retail customer (the “Purchase Date”). Qualifying PRODUCTS THAT ARE NOT REGISTERED ON-LINE WITHIN SIXTY (60) DAYS OF THE PURCHASE DATE WILL HAVE A LIMITED ONE YEAR WARRANTY FROM DATE OF PURCHASE.

2. QUALIFYING PRODUCTS. Upon registration, Test and Measurement products that qualify for coverage under FLIR’s Limited Lifetime Warranty are: MR7x, CM7x, CM8x, DMxx, VPSx not including accessories which may have their own warranty.

3. WARRANTY PERIODS. For purposes of The Limited Lifetime Warranty, Lifetime is defined as seven years (7) after the product is no longer manufactured, or ten years (10) from date of purchase, whichever is greater. This Warranty is only applicable to the original owner of the Products.

Any Product that is repaired or replaced under warranty is covered under this Limited Lifetime Warranty for one hundred eighty days (180) days from the date of return shipment by FLIR or for the remaining duration of the applicable Warranty Period, whichever is longer.

4. LIMITED WARRANTY. In accordance with the terms and conditions of this Limited Lifetime Warranty, and except as excluded or disclaimed in this document, FLIR warrants, from the Purchase Date, that all fully registered Products will conform to FLIR’s published Product specifications and be free from defects in materials and workmanship during the applicable Warranty Period. PURCHASER’S SOLE AND EXCLUSIVE REMEDY UNDER THIS WARRANTY, AT FLIR’S SOLE DISCRETION, IS THE REPAIR OR REPLACEMENT OF DEFECTIVE PRODUCTS IN A MANNER, AND BY A SERVICE CENTER, AUTHORIZED BY FLIR. IF THIS REMEDY IS ADJUDICATED TO BE INSUFFICIENT, FLIR SHALL REFUND PURCHASER’S PAID PURCHASE PRICE AND HAVE NO OTHER OBLIGATION OR LIABILITY TO BUYER WHATSOEVER.

5. WARRANTY EXCLUSIONS AND DISCLAIMERS. FLIR MAKES NO OTHER WARRANTY OF ANY KIND WITH RESPECT TO THE PRODUCTS. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (EVEN IF PURCHASER HAS NOTIFIED FLIR OF ITS INTENDED USE FOR THE PRODUCTS), AND NON-INFRINGEMENT ARE EXPRESSLY EXCLUDED FROM THIS AGREEMENT.

THIS WARRANTY EXPRESSLY EXCLUDES ROUTINE PRODUCT MAINTENANCE, SOFTWARE UPDATES, AND REPLACEMENT OF
MANUALS, FUSES, OR DISPOSABLE BATTERIES. FLIR FURTHER EXPRESSLY DISCLAIMS ANY WARRANTY COVERAGE WHERE THE ALLEGED NONCONFORMITY IS DUE TO NORMAL WEAR AND TEAR, OTHER ALTERATION, MODIFICATION, REPAIR, ATTEMPTED REPAIR, IMPROPER USE, IMPROPER MAINTENANCE, NEGLECT, ABUSE, IMPROPER STORAGE, FAILURE TO FOLLOW ANY PRODUCT INSTRUCTIONS, DAMAGE (WHETHER CAUSED BY ACCIDENT OR OTHERWISE), OR ANY OTHER IMPROPER CARE OR HANDLING OF THE PRODUCTS CAUSED BY ANYONE OTHER THAN FLIR OR FLIR’S EXPRESSLY AUTHORIZED DESIGNEE.

THIS DOCUMENT CONTAINS THE ENTIRE WARRANTY AGREEMENT BETWEEN PURCHASER AND FLIR AND SUPERSEDES ALL PRIOR WARRANTY NEGOTIATIONS, AGREEMENTS, PROMISES AND UNDERSTANDINGS BETWEEN PURCHASER AND FLIR. THIS WARRANTY MAY NOT BE ALTERED WITHOUT THE EXPRESS WRITTEN CONSENT OF FLIR.

6. WARRANTY RETURN, REPAIR AND REPLACEMENT. To be eligible for warranty repair or replacement, Purchaser must notify FLIR within thirty (30) days of discovering of any apparent defect in materials or workmanship. Before Purchaser may return a Product for warranty service or repair, Purchaser must first obtain a returned material authorization (RMA) number from FLIR. To obtain the RMA number Owner must provide an original proof of purchase. For additional information, to notify FLIR of an apparent defect in materials or workmanship, or to request an RMA number, visit http://www.flir.com. Purchaser is solely responsible for complying with all RMA instructions provided by FLIR including but not limited to adequately packaging the Product for shipment to FLIR and for all packaging and shipping costs. FLIR will pay for returning to Purchaser any Product that FLIR repairs or replaces under warranty. FLIR reserves the right to determine, in its sole discretion, whether a returned Product is covered under Warranty. If FLIR determines that any returned Product is not covered under Warranty or is otherwise excluded from Warranty coverage, FLIR may charge Purchaser a reasonable handling fee and return the Product to Purchaser, at Purchaser’s expense, or offer Purchaser the option of handling the Product as a non-warranty return.

7. NON-WARRANTY RETURN. Purchaser may request that FLIR evaluate and service or repair a Product not covered under warranty, which FLIR may agree to do in its sole discretion. Before Purchaser returns a Product for non-warranty evaluation and repair, Purchaser must contact FLIR by visiting http://www.flir.com to request an evaluation and obtain an RMA. Purchaser is solely responsible for complying with all RMA instructions provided by FLIR including but not limited to adequately packaging the Product for shipment to FLIR and for all packaging and shipping costs. Upon receipt of an authorized non-warranty return, FLIR will evaluate the Product and contact Purchaser regarding the feasibility of and the costs and fees associated with Purchaser’s request. Purchaser shall be responsible for the reasonable cost of FLIR’s evaluation, for the cost of any repairs or services authorized by Purchaser, and for the cost of repackaging and returning the Product to Purchaser.

Any non-warranty repair of a Product is warranted for one hundred eighty days (180) days from the date of return shipment by FLIR to be free from defects in materials and workmanship only, subject to all of the limitations, exclusions and disclaimers in this document.
